

Operators:-

10	+	2
10	-	2
10	*	2
10	/	2

↳ operator

$\times$	$\rightarrow$	$\circledast$	asterisk
$\div$	$\rightarrow$	/	

- Operators are the way by which we can do mathematical and programmatical calculations.

Types of operators:-

1. Arithmetic Operators
2. Assignment Operators
3. Relational Operators
4. Logical Operators
5. Membership Operators

1. Arithmetic Operators

+	$\rightarrow$	Addition
-	$\rightarrow$	subtraction
$\times$	$\rightarrow$	multiplication
/	$\rightarrow$	division
//	$\rightarrow$	floor division

$\div$ $\rightarrow$ division
 $//$ $\rightarrow$ floor division
 $\%$ $\rightarrow$ modulus operator
 $**$ $\rightarrow$ Exponentiation

$/$ $\rightarrow$ Normal division $\rightarrow$

$\rightarrow$ It gives you the exact value containing the decimal places.

$//$ $\rightarrow$ floor division.

$\rightarrow$ It gives you the output as the leftmost round off value.

$$10 / 3 = 3.333 \dots 7$$

$$10 // 3 = 3$$

$$11 / 3 = 3.66 \dots 7$$

$$11 // 3 = 3$$

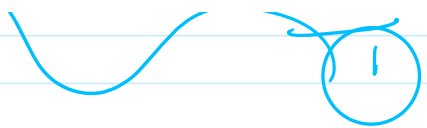

Modulus operator ($\%$):-

$\rightarrow$ It gives you the output as remainder.

$$x = 10$$
$$y = 3$$

$$10 \% 3 = 1$$

$$\begin{array}{r} 3 \\ 3 \overline{) 10} \\ \underline{- 9} \\ 1 \end{array}$$

$$11 \div 3 = 2$$

$$\begin{array}{r} 3 \overline{) 11} \\ \underline{-9} \\ 2 \end{array}$$

Exponentiation (**):-

↘ raise the power

$$2^2 = 2 \times 2 = 4$$

$$2^3 = 2 \times 2 \times 2 = 8$$

$$2^4 = 2 \times 2 \times 2 \times 2 = 16$$
